

# cisco 2900 switch commands

Table 2-18 Fields Descriptions for the show cable-diagnostics tdr Command Output

Field	Description
Interface	Interface on which TDR was run.
Speed	Speed of connection.
Local pair	Name of the pair of wires that TDR is testing on the local interface.
Pair length	Location on the cable where the problem is, with respect to your switch. TDR can only find the location in one of these cases: <ul style="list-style-type: none"><li>• The cable is properly connected, the link is up, and the interface speed is 1000 Mbps.</li><li>• The cable is open.</li><li>• The cable has a short.</li></ul>
Remote pair	Name of the pair of wires to which the local pair is connected. TDR can learn about the remote pair only when the cable is properly connected and the link is up.
Pair status	The status of the pair of wires on which TDR is running: <ul style="list-style-type: none"><li>• Normal—The pair of wires is properly connected.</li><li>• Not completed—The test is running and is not completed.</li><li>• Not supported—The interface does not support TDR.</li><li>• Open—The pair of wires is open.</li><li>• Shorted—The pair of wires is shorted.</li></ul>
